B

Supplementary Figure S1. Cross-species validation of pathogenic macrophage signatures in rat STZ-induced DR retina (GSE209872). (A) UMAP visualization of human PDR macrophages (left) and rat STZ-induced DR retina (right), showing the conservation of macrophage subpopulations across species. (B) Feature plots showing expression of conserved core genes (*Hmox1*, *Cttd*, *Fth1*) in rat retinal cells, with enrichment in macrophage populations.
